Chino, CA | +1 (949) 572-8675 | riyajain0520@gmail.com | [linkedin.com/in/riyajain20/](https://www.linkedin.com/in/riyajain20/) | github.com/riya0305 | <https://riya0305.github.io/Personal-Portfolio/>

EDUCATION

California State University, Fullerton Bachelor of Science, Computer Science, Minor: Business Data Analytics	Graduated: May 2026
University of Southern California Master of Science, Computer Science with a specialization in AI	Expected Graduation: Dec 2028
Coursework: Data Structure and Algorithms, Spreadsheet Modeling, Data Mining, Business Intelligence, Data Modeling, Software Design and Testing, Applied AI	

SKILLS

Programming: Python, Java, React, SQL, C++, Vue.js, Go, HTML/CSS, JavaScript, TypeScript, C#, R
AI / ML / LLMs: PyTorch, TensorFlow, Keras, Scikit-learn, Hugging Face, LangChain, Prompt Engineering, API Integration, Retrieval-Augmented Generation (RAG), Anthropic Claude, Fetch.ai
Tools / Platforms: Linux, Windows, Bash/Shell, AWS, GCP, Dell Boomi, Visual Studio, MySQL, MongoDB, Cloudinary, Microsoft Copilot, Cursor, Claude Code, Gemini Models, Tableau, Excel, IBM SPSS

PROFESSIONAL EXPERIENCE

AI Intern OSI Digital – Irvine, CA	July 2025 – Aug 2025
• Drove LLM production integration for enterprise clients by delivering engineer training and live demos, accelerating AI workflow adoption across 3 client teams. • Designed and deployed 5+ AI orchestration agents in Dell Boomi (AWS Bedrock) to automate HTML, PDF, and SQL data workflows, reducing manual processing time by 40%. • Built and deployed a Slack bot using OpenAI API, Flask, and Boomi to automate internal workflows, improving team response efficiency by 25% through secure, production-grade deployment.	
Data Science Research Intern CIC - PCUBED – Fullerton, CA	May 2024 – Aug 2024
• Built predictive models using L1-regularized logistic and linear regression to identify heart disease risk factors in women, achieving 90% AUC-ROC. • Optimized feature selection and model interpretability, reducing complexity while maintaining predictive performance. • Presented insights at CSUF Undergraduate Research Symposium, connecting cholesterol levels to heart failure risk.	
Coding Instructor Coding Minds Academy – Irvine, CA	May 2024 – Present
• Taught 50+ students applied AI concepts including ML, NLP, and computer vision through hands-on Python projects. • Guided student teams to deploy functional ML models such as KNN, CNNs, and Decision Trees for real-world problem solving.	

PROJECTS

Agentic XR Intelligence Unity, ARCore, ARKit, Open AI LLMs, C#	Aug 2025 – Dec 2025
• Built a multimodal agent pipeline combining spatial recognition (MediaPipe) and LLM reasoning for real-time object interaction in XR. • Implemented retrieval-based prompting enabling context-aware generative actions in augmented reality environments. • Integrated CI/CD pipeline via GitHub Actions, reducing build time by 50% and enforcing automated quality gates before each release	
Prompt Engineering with TinyLlama (Research Scholar) Python, TinyLlama, LLMs	May 2025 – Present
• Applied TinyLlama for LLM-based tasks, achieving 65% improvement in efficiency and response quality. • Reduced entropy via gamma sharpening (gamma = 2.0) for semantic embedding optimization. • Demonstrated advanced prompt engineering techniques including chaining, contextual embedding, and reasoning over structured data. • Created reusable prompt templates to streamline AI-driven workflows and enable scalable automation.	
NLP Driven Multimodal for Individuals with Impaired Speech: Published in IEEE Xplore ML, OpenCV, TTS, TF-IDF	Jan 2025 – May 2025
• Developed emotion-aware system integrating text, image, and audio for multimodal sentiment analysis using TF-IDF vectorization. • Applied OCR (OpenCV/Pytesseract) and TTS (gTTS) for accessibility to recognize characters in an image and text and turn the text into audio. • Evaluated model quality using standard metrics, achieving 90% F1-score across accuracy, precision, recall, and confusion matrix analysis.	
CircleUp Fetch AI, Go, Vue, Docker, Vite, React, MongoDB, Render	LA Hacks 2026
• Built a group scheduling platform at LA Hacks by forking the open-source Timeful app, enabling teams to find overlapping availability through shared session links and a collaborative poll and calendar flow. • Developed a screenshot-to-schedule feature where users upload calendar images via Cloudinary, the backend extracts free and busy blocks using Claude AI with a Pytesseract OCR fallback, then allows users to review and apply time slots to events. • Integrated Fetch.ai agentic endpoints to rank optimal meeting windows, recommend meeting logistics, and surface nearby location suggestions based on geolocation, exposed directly in the app as an interactive AI recommendation feature.	
SkinAI CNN, TensorFlow, Keras	Jan 2025 – May 2025
• Developed CNN-based classifier for dermatological image analysis using HAM10000 dataset using Keras and Tensorflow. • Designed and implemented the web UI for the SkinAI platform to enable users to upload dermatological images and view model predictions. • Optimized model inference to under 2 seconds through pruning and quantization, achieving 92% validation accuracy across test cases.	

LEADERSHIP EXPERIENCE

Chief Campus Relations Officer Associated Students Inc.	May 2025 – May 2026
• Represented 45,000 students as sole student representative on the Provost Search Committee while leading the Environmental Sustainability and University Affairs Commissions.
